

EFAK EXPEDITIONARY FIRST AID KIT

REV092524

The EFAK, North American Rescue's Expeditionary First Aid Kit, was designed to be the most compact, multi-use IFAK for delivering immediate critical care for penetrating, blast or other traumatic injuries. At half the size of our popular T.O.R.K. platform, the EFAK is currently the smallest platform available in our product offering. Despite its reduced size, this kit comes fully loaded with the critical medical equipment most requested by Expeditionary Military First Responders operating in the line of duty. Treatment pack out is the Advanced version meeting the Expeditionary Military First Responder Requirements.

The EFAK's super compact, 500 Denier nylon bag opens from the side in a clam shell configuration utilizing (2) two main sleeves that open on both ends for easy access and features multiple elastic loops for secure gear organization. The bag's exterior includes a MOLLE backing for mounting in the standard vertical position as well as a 3 in. internal sleeve for accommodating horizontal attachment to your duty belt. The vertical mount can be set to open left-to-right or right-to-left based on shooter preference. The TQ/Holder is attached to the (3) three MOLLE strips on the opposite side of the zipper opening. The EFAK also comes with an additional TQ Holder and Tourniquet for primary placement separate from the EFAK, meeting the (2) Tourniquet Expeditionary Military requirement. Also included is a loop patch on front of the bag for custom user labeling.

EFAK Expeditionary First Aid Kit
