

BLOOD SUPPLY PUMP

REV082324

The Blood Supply Pump is a simulated blood supply reservoir with manual pump, designed to attach to any bleeding wearable wound simulators, Wound in a Box™ task trainers, or part task trainers.

The blood flow is controlled by the operator by squeezing the hand-bulb attached to the supply line. This allows the operator to stop the blood flow when the proper medical intervention has been taken.

Construction

- 2 liter hydration reservoir bag with screw top opening.
- Hand-bulb pump with check valve to prevent open flow.
- 30 inches of blood flow tubing with standard female connector.

Specifications:

- Compatible with any bleeding wearable wound simulators, Wounds in a Box™ task trainers, or part task trainers
- Manual pump allows operator to stop blood flood when proper medical intervention has been taken

Dimensions:

- *Packaged Measurements: L 15 in. x W 7 in.*
- *Weight: 0.63 lbs. lbs.*
