

Metal Wall Case

An Ideal Solution To Safely Store & Protect

North American Rescue's Semi-Recessed Metal Wall Case provides high visibility access to critical medical supplies for use by initial first responders and bystanders in public areas. It is an ideal solution to safely store & protect Automated External Defibrillators (AEDs), Class A & B Trauma and First Aid Kits, and Public Access Bleeding Control Kits.

The cold steel cabinet with a white finish features concealed hinges, magnetic closure & recessed handle designed to open with one quick pull, without the need to twist and pull. The wall-mounted design mounts permanently on any wall with the included hardware. Features include highly visible lettering (AED, FIRST AID KIT, or BLEEDING CONTROL KIT) for fast identification, and a clear plexiglass window for viewing cabinet contents. The Bleeding Control Kit cabinet also includes convenient Instructions for Use posted on the interior back panel. The optional 80db keyed alarm system, housed in a durable internal closure, offers security for stored medical assets, alerting all around deployment or tampering. Cases are water resistant. To best protect your critical life saving products, cases are best mounted under cover and out of the direct elements.
